

MindAffect relocates to HealthTech Innovation Center in Landgoed Zonneoord - Ede

6 September 2021

After the recent closing of their Series A Investment Round - where Oost NL acts as lead investor, together with investors from the network of NLC Ventures and MSB Isala – MindAffect relocates to Landgoed Zonneoord in Ede for the beginning of a new chapter.

MindAffect is specialized in the application of artificial intelligence and neuroscience to enhance human communication and neural circuit testing.

Their unique patented AI algorithms interpret brain signals to direct communication or conversely to use the signals to determine the validity (or health) of the sensory pathway in the patient. The funding will be used to broaden the application range by creating diagnostic systems for vision, hearing and brain health. They have started their tenure by hosting 65 students from the Christelijke Hogeschool Ede for their Innovation Day.

CEO, Jennifer Goodall: “MindAffect is delighted to relocate to the HealthTech Innovation Center at Landgoed Zonneoord! The team was inspired by the impressive connections with leading corporates such as Phillips, leading academic medical institutions, proximity to public transportation and renowned educational institutions, and the incredible beauty and tranquility of the campus. We are excited to do

great things here!”

Oost NL supported their portfolio company MindAffect in finding the right environment for the beginning of this new chapter.
